Somaya Sharma

Business Systems Analyst | Process Improvement | Requirements, Automation & Digital Transformation

London, England, United Kingdom

Summary

I'm a Business Analyst passionate about using automation, AI, and smart systems to remove friction, simplify processes, and help teams operate at their best. I thrive at the point where operations meets intelligent technology; where a small system change can create disproportionate impact. A lot of my work centres around transforming manual, repetitive tasks into automated workflows, designing digital tools that make sense to real people, and building operational frameworks that scale with the business. I love understanding how things really work, spotting inefficiencies, and re-engineering processes so they become intuitive, faster, and more reliable. Beyond the tech, I'm someone who thinks deeply about structure, clarity, and continuous improvement. I enjoy translating business challenges into elegant systems, and I'm energised by roles that let me combine analytical problem-solving with creativity and user-centred thinking. What I'm great at: - Designing automated workflows that replace manual admin- Turning ambiguous business problems into clean, structured solutions- Creating intuitive digital tools that support operational teams- Analysing processes end-to-end and identifying where automation adds real value- Bringing clarity and simplicity to complex operational environments What I'm working towards: Deepening my expertise in AI-supported operations, scalable automation, and intelligent systems design, and using these capabilities to help organisations operate more efficiently, transparently, and sustainably. If you're building in the space of automation, AI, or operational transformation, I'd love to connect.

Experience

TECOSIM UK

Business Operations Analyst

February 2025 - Present (1 year 5 months)

England, United Kingdom

Delivered 20+ Power Platform solutions, including Power Apps, Power Automate workflows, SharePoint systems, and reporting tools, streamlining processes across engineering and business functions.

Developed and supported digital solutions used by 200+ employees across the UK and Romania, improving operational visibility, reducing manual administration, and increasing process consistency.

Led business analysis activities, including requirements gathering, stakeholder workshops, process mapping, and the creation of AS-IS and TO-BE process models to identify and implement process improvement opportunities.

Acted as the bridge between business stakeholders and technical delivery, translating business needs into practical systems, automations, and reporting solutions that delivered measurable business value.

LIDO

Associate Marketing Manager

February 2021 - January 2022 (1 year)

Managed and mentored a team of 20+ Marketing Associates, driving performance, collaboration, and process improvements that contributed to a 25% increase in team productivity.

Delivered business and regulatory reporting to operational and risk management teams, supporting compliance initiatives and process improvements that reduced reporting errors by 30%.

Developed interactive Tableau dashboards to track business KPIs, operational metrics, and marketing performance, enabling stakeholders to make faster, data-driven decisions and improving decision-making speed by 22%.

Collaborated with cross-functional stakeholders to analyse performance data, identify improvement opportunities, and implement reporting enhancements that increased visibility and operational effectiveness.

Education

Loughborough University

Master's of Business Analytics · (October 2022 - September 2023)

Manipal University Jaipur

Bachelor of Engineering - BE, Electronics and Communications Engineering

Ryan International School, Noida

Higher Education
